

DMSO Protocol

Breast and Lymph Decongestion Treatment

Protocol for Topical Use of Iodine + MSM Spray + DMSO w/Aloe

The purpose of this treatment is to work on killing bacteria, provide an anti-inflammatory response, help any pain, and provide faster healing to the area of concern.

PREPARATION:

Prepare the MSM spray as follows:

If you are using the liquid MSM, simply pour into a glass spray bottle for use as instructed below.

If you are using the MSM powder, add 1 teaspoon of the powder to 2oz. of warm distilled water. Stir until dissolved. Pour into a glass spray bottle and use as instructed below.

INSTRUCTIONS:

Wash hands thoroughly before touching area being treated to avoid any bacteria from being exposed to the treatment area.

You may also use sterile gauze to apply and gloves if you want to be extra sanitary.

1. **Apply the liquid Iodine** sparingly to the clavicle (collar bone) area, downward in the axilla (armpit/lateral side) and around the area of concern on the breast.

Note: Iodine w/color will stain anything it touches, so prepare to protect any fabric/furniture, etc. near you.

As an alternative, you may also pour the liquid iodine into a glass spray bottle

and spray it across the affect area as described above.

2. **Spray the MSM** lightly over the same area you covered with the Iodine.
3. While the MSM is still wet (don't let it dry completely), **apply the DMSO w/ALOE**.
4. **Wait.** Do NOT wear or come in contact w/fabric for at least 30 min. Once that time has passed and the area is dry, you can cover this treated area.
5. **Repeat** this 1 X per day, for a total of 14 days.
6. **SCHEDULE** a thermal scan to see any changes after completing the protocol.
